

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1           **Claim 1 (previously presented):**   A portable radio  
2   apparatus comprising:  
3           a radio circuit;  
4           a speaker; and  
5           a shield member for electromagnetically shielding the  
6   radio circuit from the speaker,  
7           wherein the shield member includes at least one  
8   ventilation hole having a size that does not affect the  
9   shielding performance, and  
10          wherein the ventilation hole is provided in close  
11   proximity and opposite of a sound hole at a rear of the  
12   speaker.

1           **Claim 2 (original):**   A portable radio apparatus  
2   according to claim 1, wherein the shield member is a shield  
3   case disposed to cover the radio circuit.

1           **Claim 3 (original):**   A portable radio apparatus  
2   according to claim 1, wherein the shield member is a holder  
3   having a shape to cover the rear and sides of the speaker.

**Claim 4 (canceled)**

1           **Claim 5 (previously presented):**   A portable radio  
2   apparatus comprising:  
3           a radio circuit;  
4           a speaker; and  
5           a shield case disposed to cover the radio circuit for  
6   electromagnetically shielding the radio circuit from the  
7   speaker,  
8           wherein the shield case includes at least one  
9   ventilation hole having a size that does not affect the  
10   shielding performance, said ventilation hole provided on a  
11   face of the shield case in close proximity and opposite to  
12   a rear of the speaker, and  
13           wherein compressed air by the vibration of the speaker  
14   passes through the ventilation hole and propagates in a  
15   space enclosed by the shield case.

1           **Claim 6 (currently amended):**   A portable radio  
2   apparatus comprising:  
3           a radio circuit;  
4           a speaker; and  
5           a holder having a shape to cover a rear and sides of  
6   the speaker for electromagnetically shielding the radio  
7   circuit from the speaker,

8            wherein the holder includes at least one ventilation  
9        hole having a size that does not affect the shielding  
10       performance, said ventilation hole provided on a face of  
11       the shield holder in close proximity and opposite to a rear  
12       of the speaker, and

13           wherein compressed air by the vibration of the speaker  
14       passes through the ventilation hole and propagates in a  
15       space enclosed ~~[[by]]~~ around the holder.
